细胞定位	[Barrier-to-autointegration factor]: Nucleus. Cytoplasm. Chromosome. Nucleus envelope. Note=Significantly enriched at the nuclear inner membrane, diffusely throughout the nucleus during interphase and concentrated at the chromosomes during the M-phase. The phosphorylated form (by VRK1 or vaccinia virus B1 kinase) shows a cytoplasmic localization whereas the unphosphorylated form locates almost exclusively in the nucleus (PubMed:24600006, PubMed:16495336) May be included in HIV-1 virions via its interaction with viral GAG polyprotein.
Clonality	Monoclonal
