背景介绍	The product of this gene belongs to a small family of adapter proteins that are k nown to interact with a number of receptor tyrosine kinases and signaling molecu les. This gene encodes a growth factor receptor-binding protein that interacts w ith epidermal growth factor receptor (EGFR) and ephrin receptors. The protein pl ays a role in the integrin signaling pathway and cell migration by binding with fo cal adhesion kinase (FAK). Several transcript variants encoding two different iso forms have been found for this gene. [provided by RefSeq, Jun 2011]
