细胞定位	Nucleus, nuclear pore complex. Nucleus membrane {ECO:0000250 UniProtKB:O08587}; Peripheral membrane protein {ECO:0000250 UniProtKB:O08587}; Nucleoplasmic side {ECO:0000250 UniProtKB:O08587}. Note=Localizes to the nucleoplasmic fibrils of the nuclear pore complex (By similarity). Dissociates from the NPC structure early during prophase of mitosis (PubMed:12802065) Associates with the newly formed nuclear membrane during telophase (PubMed:12802065). In the testis, the localization changes during germ cell differentiation from the nuclear surface in spermatocytes to the whole nucleus (interior) in spermatids and back to the nuclear surface in spermatozoa (By similarity). {ECO:0000250 UniProtKB:O08587, ECO:0000269 PubMed:12802065}
Clonality	Monoclonal
