背景介绍	This gene encodes the microtubule-associated protein tau (MAPT) whose transcript undergoes complex, regulated alternative splicing, giving rise to several mRNA s pecies. MAPT transcripts are differentially expressed in the nervous system, dep ending on stage of neuronal maturation and neuron type. MAPT gene mutations have been associated with several neurodegenerative disorders such as Alzheimer's di sease, Pick's disease, frontotemporal dementia, cortico-basal degeneration and p rogressive supranuclear palsy.
