背景介绍	This locus encodes both the light and heavy subunits of acyloxyacyl hydrolase. The encoded enzyme catalyzes the hydrolysis of acyloxylacyl-linked fatty acyl chains from bacterial lipopolysaccharides, effectively detoxifying these molecules. The encoded protein may play a role in modulating host inflammatory response to gram-negative bacteria. Alternatively spliced transcript variants have been described.[provided by RefSeq, Apr 2010], Secreted . Cytoplasmic vesicle . Detected in urine. . The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
