背景介绍	This gene is the putative transforming gene of avian sarcoma virus 17. It encode s a protein which is highly similar to the viral protein, and which interacts directly with specific target DNA sequences to regulate gene expression. This gene i s intronless and is mapped to 1p32-p31, a chromosomal region involved in both tra nslocations and deletions in human malignancies. [provided by RefSeq, Jul 2008],
细胞定位	Nucleus.
纯化	The antibody was affinity-purified from rabbit antiserum by affinity-chromatogra phy using epitope-specific immunogen.
Clonality	Polyclonal
