背景介绍	armadillo repeat containing, X-linked 2(ARMCX2) Homo sapiens This gene encodes a protein containing a potential N-terminal transmembrane domain and multiple armadillo (arm) repeats. Proteins containing arm repeats are involved in development, maintenance of tissue integrity, and tumorigenesis. This gene is located in a cluster of related genes on chromosome X. There is a pseudogene for this gene on chromosome 7. Alternative splicing in the 5'UTR results in multiple transcript variants encoding the same protein. The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
