背景介绍	The protein encoded by this gene is a nuclear basic leucine zipper protein that belongs to the AP-1/ATF superfamily of transcription factors. The leucine zipper of this protein mediates dimerization with members of the Jun family of proteins. This protein is thought to be a negative regulator of AP-1/ATF transcriptional events. [provided by RefSeq, Jul 2008], Nucleus . Cytoplasm . Present in the nucleus and cytoplasm, but shows increased nuclear translocation after activation of T-cells. .
