背景介绍	This gene encodes a protein that is a component of the BLOC1 multi-subunit prote in complex. This complex is necessary for the biogenesis of specialized organelle s of the endosomal-lysosomal system, including platelet dense granules and melan osomes. Mutations in this gene cause Hermansky-Pudlak syndrome 8, a disease char acterized by lysosomal storage defects, bleeding due to platelet storage pool de ficiency, and oculocutaneous albinism.
