背景介绍	This gene encodes a non-receptor tyrosine kinase belonging to the Tec kinase fam ily. The protein contains a PH-like domain, which mediates membrane targeting by binding to phosphatidylinositol 3,4,5-triphosphate (PIP3), and a SH2 domain that binds to tyrosine-phosphorylated proteins and functions in signal transduction. The protein is implicated in several signal transduction pathways including the S tat pathway, and regulates differentiation and tumorigenicity of several types o f cancer cells. Alternatively spliced transcript variants have been found for thi s gene. [provided by RefSeq, Mar 2016],
