背景介绍	The protein encoded by this gene is a member of the CXC chemokine family. This ch emokine is one of the major mediators of the inflammatory response. This chemoki ne is secreted by several cell types. It functions as a chemoattractant, and is a lso a potent angiogenic factor. This gene is believed to play a role in the patho genesis of bronchiolitis, a common respiratory tract disease caused by viral infe ction. This gene and other ten members of the CXC chemokine gene family form a c hemokine gene cluster in a region mapped to chromosome 4q. [provided by RefSeq, Jul 2008],
